

RUST-X CLEANING MEDIA CL000 , CL005

Rust X manufactures range of cleaning media with rust preventive properties. These are effective in removing dirt, dust, greases, metal particles, cutting oils etc. from the components. The cleaning media functions by dissolving oils etc. into the media thus de-greasing the components, or de-attaching the metal particles or dust as it dissolves the greases or oils.

The cleaning action is further enhanced in the Ultrasonic Machines, where the component as well as particles are vibrated with the help of ultrasound waves.

This material is non-hazardous and safe to use for all kind of metallic components including brass, steel, silver, copper, aluminum, & platings.

Application:

By Dipping, Jet Spray, Ultrasonic Machines & Automatic Cleaning Machines

Property	Value
Kinematic Viscosity @ cSt @ 40°C	<1 cSt
Specific Gravity	0.88 - 0.96
Flash Point	45 deg C
Coverage (sq m/ Lt)	300
Effective Film thickness after drying	CL-000 = 0 micron CL-005= Less than 0.5 micron
Rust Protection	CL-000 = 7 days CL - 005 = 15 days (in open storage conditions)
