

RUST-X™

REST WITHOUT RUST

VCI Foam

Product Description

VCI Foam has seen a growing response. It is used in place of corrugated separators. The components are protected from dents, scratches along with the prevention of rusting on the components.

VCI Foam provides a cushioning effect due to an expanded Poly Ethylene structure.

These are available in the form of Bags of the separators, sheets and small width rolls for separator lining as in the photograph.

Application

VCI foams are easy to use. Small width rolls of example 3-6" that corresponds to the distance between the two separators are wound in a snake like fashion around the components. It solves two proposes, rust prevention and dent prevention.

It can also be used to replace corrugated separators for small parts.

Technical Data

Available in 3mm thickness
 Sinze 3" to 60" in rolls or sheets
 Bags minimum size 10" width
 VCI Coating - 8-10 gsm on either side

Product Code : VCI 710
